

# Email Notifier

## Management Tool for Today's Healthcare Enterprise

Codonics Safe Label System (SLS) **Email Notifier** option\* provides pharmacy with an easy-to-use medication management tool that delivers essential details about every SLS Point of Care Station (PCS) on the network. Email Notifier gathers information, reports activity, status and issues to pharmacy, bio-med, or any specified email recipient on demand. Based on site-specific rules, Email Notifier allows pre-defined types of data on a pre-defined frequency to be sent to specific recipients as an email on any device. Tasks can be handled immediately or when convenient depending on the urgency.

Email Notifier

## NOTIFICATIONS

### Examples of Email Notifier

- **Notification of Pharmacy-Specific Issues:** Pharmacy related issues summarizing the previous 24 hours can be collected at the beginning of each day by the pharmacy team so that updates can be made to the formulary and subsequently updated on SLS PCS (e.g., Drug Not Found)
- **Notification of PCS Status Issues:** SLS PCS status issues can be collected in the late afternoon and sent to anesthesia techs so ink cartridges could be replaced in the evening or in the morning before cases begin (e.g., Ink Low)
- **Other Notifications:** Notifications such as PCS devices being offline can be sent to bio-med as they occur for investigation

\*Email Notifier is an optional application available with the SLS Administration Tool (AT).

*"The addition of the Email Notifier to the workflow makes maintenance of the SLS drug formulary a "snap." In this age of medication shortages, keeping up and maintaining the formulary is challenging. Email Notifier is convenient, and assures compliance and maintenance is addressed easily."*
